

June Kim

Machine Learning Engineer

+82 10-2616-2974 | junekinns@gmail.com | linkedin.com/in/june3 | junekinns.github.io

Machine learning engineer working on generative image models, from training data and fine-tuning to production, with a background in real-time graphics.

EXPERIENCE

SNOW Corp. | Machine Learning Engineer | Aug. 2023 – Present

- Took object removal, built on Segment Anything and FLUX, from idea to production in SNOW's photo-editing apps; the feature handles millions of requests a month.
- Redesigned the fine-tuning loss, which made the most common removal failures noticeably rarer.
- Built a synthetic training-data pipeline for object removal.
- Designed a routing system for background removal and trained domain-specific models behind it.
- Trained an image-restoration model for a portrait-retouching prototype.

NAVER Z Corp. | Unity Client Engineer | Apr. 2022 – Aug. 2023

- Developed terrain tools and UI features for the Unity editor used to create 3D worlds on a social avatar platform.
- Migrated server-side editor data for the web launch and troubleshooted compatibility problems across a large library of existing 3D content.

SNOW Corp. | AR Software Engineer | Dec. 2019 – Apr. 2022

- Developed real-time camera effects in Lua and GLSL for mobile apps.
- Built plugins for the in-house tools used to make camera effects.

RESEARCH & PROJECTS

- **AAAI-27 Student Abstract** (sole author, under review) on how well open models judge image edits.
- Challenge entries: **SIGGRAPH Asia 2026 Volumetric Video** (sparse-view track, solo) and **NTIRE 2026 Shadow Removal** (CVPR workshop).

EDUCATION

- **University of Illinois Urbana-Champaign** | Online Master of Computer Science | 2025 – Present
- **Chung-Ang University** | B.E. in Digital Imaging Engineering, Cum Laude | 2017 – 2020

SKILLS

- ML: PyTorch, Diffusers, diffusion models, LoRA fine-tuning, inpainting, image segmentation
- Engineering: Python, OpenCV, FastAPI, Docker, Linux, MLflow
- Languages: Korean (native), English (IELTS Academic 7.0)
